

Yi-Ting (Stuart) Chen

Frontend Engineer

Location: Taiwan (Open to Remote opportunities)

GitHub: github.com/stuartchendev

Portfolio: stuartchendev.github.io

Summary

Frontend Engineer focused on building scalable React applications with TypeScript.

Experienced in state-driven UI design, RESTful API integration, and predictable async data handling.

Comfortable reasoning about design trade-offs and collaborating with backend teams.

Skills

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3

State & Architecture: State-driven UI, MVC, Derived State, Data Flow Design

API & Async: RESTful API integration, Typed async responses (Promise<T>), Loading/Error handling

Tooling: Git, Responsive Design

Projects

React Portfolio — React + TypeScript

[GitHub](#) | [Live Demo](#)

- Designed project detail interaction using `activeProjectId` as a single source of truth instead of boolean UI flags.
- Applied derived state patterns for scalable state modeling.
- Separated component responsibilities with responsive layout design.
- Typed asynchronous data responses and implemented loading/error handling patterns.

Forkify — MVC Recipe Search Application

[GitHub](#) | [Live Demo](#)

- Implemented MVC architecture with centralized application state.
- Managed search, pagination, and asynchronous API synchronization with predictable state updates.
- Ensured clear data flow between model and view layers.

Mapty — OOP to MVC Refactor Case Study

[GitHub](#) | [Live Demo](#)

- Refactored application from OOP to MVC architecture
- Reduced coupling by restructuring model/view/controller responsibilities
- Improved maintainability and data flow clarity

Experience

Frontend Developer (Independent Projects) | 2024 – Present

- Built and deployed multiple React + TypeScript applications
- Designed scalable state-driven UI architecture
- Refactored application structure from OOP to MVC for improved maintainability
- Integrated REST APIs with proper async and error handling

Education

Bachelor of Computer Science and Information Technology
